

Environmental and Quality Philosophy

“We, the Yoshida Group, strive to respond to our customers’ design needs while pursuing comfort and beauty as a plastic molding and decoration manufacturer. We advance safe, secure, and high-quality ‘manufacturing’ that considers the Earth’s environment, while working for the use of resources sustainably and the conservation of biodiversity.”

- Environmental Policy -

1. We will comply with laws and regulations, ensure the non-use of prohibited substances, properly manage waste disposal, efficiently utilize water and resources, protect biodiversity, and strive to prevent environmental pollution.
2. We will strive to reduce the environmental impact of our products, including recycling, in all phases of their life cycle, from material procurement, manufacturing, sales, use, and disposal, in order to realize a sustainable, recycling-oriented society.
3. We will strive to reduce energy consumption and greenhouse gas emissions by increasing utilization rates and eliminating “waste” in the workplace in order to prevent global warming.
4. We will provide training opportunities to employees to enhance environmental awareness and actively engage in communication with stakeholders to promote transparency and mutual understanding.

- Quality Policy -

1. We strive for product design, material selection, and process management that prevents the generation of defective products.
2. We promptly respond to complaints and quality improvement requests received from our customers, aiming to prevent the recurrence of issues.
3. We conduct proper calibration and maintenance of tools and equipment used, establishing an efficient and stable manufacturing environment.

This environmental and quality policy will be thoroughly communicated to all employees of the Yoshida Group and those who work with us. It is also available to the general public.
