

Our ISCC PLUS Quality Policy

In addition to complying with all relevant laws and regulations, we deeply recognize the importance of global environmental conservation. We commit to reducing our environmental impact throughout all aspects of our business operations and the entire product lifecycle—from procurement to manufacturing, sales, use, recycling, and disposal—and strive to contribute to the sustainability of global society.

To accomplish this, we maintain, manage, and operate the ISCC PLUS Quality Management System in accordance to the ISCC PLUS requirements with the ISCC principles—ecological, ethical, social, and economic requirements. By regularly developing, evaluating, and revising relevant policies and procedures, and striving for continuous improvement of the system, we ensure the traceability of ISCC PLUS-certified plastic materials and certified products, while increasing the utilization rate of recycled or biomass materials.

In carrying out this initiative, we will comply with ISCC requirements and commit no fraud, such as multi counting.

Our ISCC PLUS Quality Objectives

1. We properly maintain, manage and operate our ISCC PLUS quality management system.
2. We aim to produce at least one product per year that uses ISCC PLUS certified plastic materials, and aim to have at least 10% of the recycled materials and biomass materials used be ISCC PLUS certified plastics.
